DETAILED ACTION

1. Claims 1 and 4 are pending in this office action, claims 2, 3, and 5 are canceled.
2. Applicant's arguments, filed January 24, 2007, have been considered and are persuasive.

Claim Rejections

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Awadalla (U.S. Patent Pub. No. 2002/0184494) in view of Ishibashi (U.S. Patent No. 6,321,654).

Regarding claims 1 and 4, Awadalla teaches a method/segmentedly encrypted document print job which preserves options for post-rendering analysis/processing of selected non-content components comprising:

- Identifying and individuating within such a job the content commands as distinguished from the non-content commands (fig. 1, ref. num 12 and paragraph 0031);
- As a sequence of said identifying and individuating, encrypting only data contained within the content commands (fig. 1, ref. num 10 and paragraph 0040).

Awadalla does not teach **identifying and individuating, within such content commands, the content-field portions of those commands** and encrypting only **the content-field portions**.

Ishibashi teaches **identifying and individuating, within such content commands, the content-field portions of those commands** (col. 5, lines 11-17) encrypting only portions that effect rendering of data (fig. 2 and col. 5, lines 45-57).

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine encrypting only the portions that control rendering, as taught by Ishibashi, with the method of Awadalla. It would have been obvious for such modifications because system can be simplified (and less costly) by only having to operate on a certain data, i.e., I-frames instead of P-frames and B-frames (see col. 5,

lines 58-64 of Ishibashi). Additionally, like PDL, I-frames control the layout of the rest of the content (P-frames and B-frames). Without the I-frames, the video would be unusable; similar to losing the content-field portions of content commands in PDL.
